

The scope of the quality management system is based on the design, production and test of active and passive Delay Line, Pulse Transformers, Data Bus Couplers, Transceivers, Power Transformers and LAN and Telecom assemblies for the aviation, space and defense industries with the premise that a product manufactured by the quality management system will meet or exceed customer requirements as well as any applicable regulatory requirement. In order to benefit from this quality management system, the organization will:

- Achieve, maintain and seek to improve continuously the quality of its products in relationship to the requirements for quality.
- Improve the quality of its own operations, so as to continuously meet all customers' and other stakeholders' stated and implied needs.
- Provide confidence to its internal management and other employees that the requirements for quality are being fulfilled and maintained, and that quality improvement is taking place.
- Provide confidence to the customer and other stakeholders that the requirements for quality are being, or will be achieved in the delivered product.
- Provide confidence that the quality-system requirements are fulfilled.

It should be noted that all applicable statutory or regulatory requirements shall take precedence over any requirement.
